The American Shorthair is categorized by CFA as a natural breed. It is a true breed of working cat, with no part of its anatomy so exaggerated as to foster weakness.

The general effect should be that of a strongly built, well balanced, symmetrical cat with conformation indicating power, endurance and agility.

The current CFA show standard for the American Shorthair was designed to preserve our breed as a working cat of unique beauty that nature presented to us in the founding years of this country.

Though many have assumed that the American Shorthair is a modern breed, many of our contemporary lines can trace one or more branches of their pedigree to cats listed in CFA’s first Stud Book – that’s 1906.
FELINE STRUCTURE

PROPORTIONS: slightly longer than tall. (Height is profile measured from top of shoulder blades to ground. Length is profile measured from tip of breastbone to rear tip of buttocks.) Length of tail is equal to distance from shoulder blades to base of tail. A judge should trust his/her natural eye for symmetry and the feel of the cat when checking proportion and balance, keeping in mind however, that no feature should be so exaggerated as to foster weakness.

Illustration by Rosemonde S. Peltz, M.D.
American Shorthair
Point Allotments

- **Type (60%)**
  - Head ........... 30
  - Body .......... 30

- **Color (25%)**
  - Eye color ..... 5
  - Coat color .. 20
  - Tabby Patterns divided
    - Pattern 10
    - Color .... 10

- **Coat (15%)**

- While total points for type account for 60% of our American Shorthair standard, the body shape, proportion, size, bone and length of tail contribute 30% of the total picture. This was increased from 25 points in 1996 when the Breed Council Membership voted to reduce eye color from 10 point to 5 points and move those 5 points to the body, making the point allotments for the head and body equal.

- The only other changes to the standard since 1996 have been the addition of more color classes and refinements of color descriptions.
**Head – 30 points**

*Includes size, shape of eyes, ear shape, and set and structure of nose*

- The LARGE head of the American Shorthair must be in proportion to the well-developed body.
- Note how well these three fit into the overall picture of the cats.
Head

Full cheeked face, slightly longer than wide.

- The full-cheeked face gives the impression of an oblong (rectangle) in shape, just slightly longer than it is wide.
- This can best be determined by looking down on the head and viewing the shape from the back of the skull to the end of the muzzle.
The sweet, open expression specified for the American Shorthair is best observed when the cat is alert and interested in either an individual object or in its overall surroundings.
Head

- Large and in proportion to the body.
- Face is full-cheeked, oblong shaped & slightly longer than wide.
- As shown in the diagram, the head is divided into two equal parts.

- From the base of the ear to the middle of the eyes, and from the middle of the eyes to the chin tip.
- The underlying skull structure. Which includes wide, rounded cheek bones, creates the full-cheeked, rounded appearance to the sides of the face.
Head - eyes

- Large and wide with upper lid shaped like half an almond and lower lid shaped in a fully rounded curve
- At least the width of one eye between eyes
- Outer corners set very slightly higher than inner corners
- These are good examples of properly shaped eyes that are bright, clear and alert.
Head - ears & muzzle

- Ears medium size
  - slightly rounded at tips
  - not unduly open at base

- Distance between ears equals 2x distance between eyes

- Squared muzzle
  - definite jowls in mature males

- Jaws strong & long enough to grasp prey

- Notice that width of squared muzzle is bounded by the same line that runs from inside corner of the ears & center of the eyes
HEAD - Ear Size & Set

Medium size, slightly rounded at tips
Set not well defined in standard -- symmetry is key
When viewed in profile, the forehead forms a smooth, moderately convex continuous curve flowing over the top of the head into the neck.

The nose is medium length, same width for entire length. When viewed in profile, there is a gentle, concavely curved rise from the bridge of the nose to the forehead.
HEAD - Profile

Too Straight
Shallow & flat forehead
Exaggerated

Exaggerated, abrupt change of direction is incorrect

Gentle, concavely curved rise from bridge of nose to forehead

Correct, moderate convex continuous curve flowing over top of head to the neck
BODY – 30 points

Includes shape, size, bone & length of tail

Viewed from the side, body is divided in three equal parts

A - tip of breastbone to elbow
B - elbow to front of hindleg
C - front of hindleg to tip of buttocks

Muscular, with well-developed shoulders, chest & hindquarters. Back is broad, straight & level. Viewed in profile, there is a slight slope down from hip bone to base of tail.
LEGES, PAWS & TAIL

- **LEGS**
  -- Medium in length & bone
  -- Heavily muscled
  -- Viewed from rear, all four legs straight and parallel with paws facing forward

- **PAWS**
  -- Firm, full & rounded with heavy pads
  -- Toes: five in front, four behind

- **TAIL**
  -- Medium length
  -- Heavy at base
  -- Tapering to abrupt blunt end in appearance, but with normal tapering final vertebrae
COAT – 15 points

- Short
- Thick

- Even and hard in texture, but not coarse
- Regional and seasonal variation in thickness allowed

- Coat dense enough to protect from moisture, cold and superficial skin injuries
COLOR IS ALSO IMPORTANT
25% of total points

- Eye Color 5
- Coat Color 20
  -- Tabby Patterns divided
    Pattern 10
    Color 10

While the old adage saying you need to build the house before you paint it is certainly true in the case of our American Shorthairs with 60% of the points allotted to type, color is also important. We have included eye color as part of the 25 points because of its direct relationship to the color of each cat.

The American Shorthair rainbow currently includes 44 color classes (including AOV) with many different colors within those classes. In addition to prescribing coat colors and patterns, our standard also defines specific requirements for the nose leather, paw pads and eye color for each recognized color.

Although color classes within our American Shorthair are not broken into divisions, it is convenient to group them in that fashion for purposes of discussion.
Some Solid Colors

Odd-Eyed White
Gold-Eyed White
Blue-Eyed White
Cream
Black

Very small percentage of current registrations
Parti-colors

Tortoiseshell

Blue Cream

Extremely small percentage of current registrations
Some Shaded & Smokes

Shaded Silver
Black Smoke
Shaded Tortie
Shell Cameo

ALL REQUIRE WHITE UNDERCOAT
Some Tabby Patterns

Red Tabby
Brown Tabby
Brown Patched Tabby
Silver Tabby
Silver Mackerel Tabby
Cameo Tabby

Markings dense & clearly defined
More Tabby Patterns

Blue Tabby

Classic Tabby pattern

Red Mackerel Tabby

Brown Tabby

Blue Mackerel Tabby

Silver Ticked Tabby

Cream Tabby

Points are divided: 10 for color & 10 for pattern
Some of the “And Whites”  
(Any recognized color & white)

Blue Tabby & White  
Blue & White  
Silver Mackerel Tabby & White

Calico  
Brown Patched Tabby & White  
Blue Ticked Tabby & White  
Black & White

The “and whites” are the 2nd most popular class of American Shorthairs being registered
**PENALIZE**

- Excessive cobbiness or ranginess
- Very short tail

**DISQUALIFY**

- **Any appearance of hybridization**
  - Long or fluffy fur
  - Deep nose break
  - Bulging eye set
  - Brow ridge
  - Hybridized colors
    - chocolate, sable, lavender,
    - lilac or point restricted

- It is not necessary for the judge to consider ancestry when evaluating exhibits. If any of the listed characteristics are present, there is no need to know the pedigree. An American Shorthair possessing one or more of the undesired features must be disqualified, whether or not obtained from hybrid ancestry.
DISQUALIFICATIONS (continued)

- Undershot or overshot bite
- Kinked or abnormal tail
- Locket or button
- Incorrect number of toes
- Tongue persistently protruding
- Obesity or emaciation

**AND**

*Any feature so exaggerated as to foster weakness*

And finally, the general disqualification for any feature so exaggerated as to foster weakness was written by Jane Martinke in the late 1960s as a forward to the standard she developed for the American Shorthair. It has been retained in the modern standard because it embodies the overall intent to preserve the American Shorthair as presented to us by nature.
HANDLING

BODY IS POWERFUL AND WELL-DEVELOPED

- Support firmly on way to & from judging cage
- Place all four feet on the table
- Use teaser to evaluate natural features, but don’t over stimulate
- Allow controlled movement to observe overall balance & structure
- Feel the coat for proper density & check for correct undercoat color
DISTINCTIVE FEATURES

Each breed has special characteristics of appearance that immediately set it apart from others. The American Shorthair is no exception. In review, please note the following distinctive features:

- **BODY**
  - Balance & proportion of hunting, working animal

- **HEAD**
  - Large
  - Oblong face, with squared muzzle
  - Medium length nose, same width for entire length
  - Gentle concave curve from bridge of nose to forehead
  - Moderate convexly curved forehead

- **EARS**
  - Medium size, slightly rounded at the tips
  - Inner corner in line with middle of the eye

- **TAIL**
  - Medium length, tapering to abrupt end in appearance

- **EYES**
  - Large, wide set with unique shape

Put the whole together and no matter what color you paint it, it would still be identifiable next to any other breed. Even a novice will recognize and appreciate its unique style.
Here’s a look at a few American Shorthair Breed Winners and National Winners

2019-2020 GC,NW - Blue Tabby male

2019-2020 GC,GP,NW - Brown Patched Tabby spay
2016-2017 GC, BWC, NW - Silver Tabby & White male

2004-2005 GC, BW, NW - Blue Tabby female

2009-2010 GC, BW, NW - Brown Tabby male
2013-2014 GC,BW,NW - Shaded Silver male

2016-2017 GC.BWI,NW - Brown Tabby Male
2019-2020 GC,BW,NW - Brown Tabby male

1992-1993 GC,BW,NW - Brown Patched Tabby female
2017-2018 GC,NW - Silver Tabby male

2015-2016 GC,BW,NW - Silver Tabby & White male

2001-2002 GC,BW,NW - Red Tabby male

2005-2006 GC,BW,NW - Brown Tabby male
2016-2017 GC, GP, NW - Silver Tabby & White spay

1976-77, 78 GC, BW, NW - Cameo Tabby male

1990-1991 GC, BW, NW - Brown Tabby male

2008-2009 GC, BW, NW - Brown Tabby male
2002-2003 GC,BW,NW - Silver Tabby male

1994-1995 GC,BW,NW - Brown Tabby female
American Shorthairs across time

While the “look” (& photographic techniques) may have changed over the years, the cats shown below both meet the current written standard.

1972-73, 75 GC,BW,NW - Silver Tabby male

2021-2022 GC,BWR,NW - Silver Tabby & White male
Judges Responsibilities

We have a very definite responsibility in all breeds to reward breeders whose efforts result in cats bred to the accepted standard, especially those breeders who consistently do so.

Judges must be able to justify their decisions by relating to the standard. If the type is not the type in the standard; it is incorrect.

Judges must be aware of fads that creep into breeds. A few years ago, many Persians with the “pig” look were being shown. Some judges felt that look had to be right because it was being shown in greater and greater numbers. But numbers never made this look right. We must be careful that we do not promote a style that may be “in” because cats aren’t clothes, and standards don’t come in seasons. As judges you give endorsements, and you should be endorsing only those cats that meet the CFA standard.
